SOFTWARE PRODUCT DEVELOPMENT

Rashi Technologies is a growing Software Product development and IT consultancy services Firm, building robust, secure and reliable customized applications for its clients

We believe in adhering to various software development standards to ensure scalability, security and reliability of the software

We are also fully sensitive to the user interfaces in our products to provide highly satisfying user experience.

PLATFORM SERVICES

Rashi developed a web-based educational content delivery platform and demonstrated the potential of online educational content delivery.

We offer the platform to the potential content owners who like to publish and disseminate their educational content to a wider audience in the digital world. A content owner could be a professional, an educational institution or anyone with the required domain expertise.

www.Way2exams.com

An e-learning platform launched by Rashi Technologies in the year 2011 for disseminating examination related content. It help candidates prepare for their examinations.

Audit and Assurance Services

Information technology dependent environment has opened up several opportunities to the audit and assurance professionals also challenging them to re-imagine the way they render professional services. Several tools have emerged which empower the Auditors to identify, collect and evaluate data at a faster pace than ever before. These powerful tools enhance the analytical capabilities of assurance professionals and help them provide actionable insights to the Management in a timely manner.

During the past decade we at Rashi Technologies have provided

- Process Automation using niche technology to our clientele helping improve their productivity
- Business Process Re-Engineering Services to attain maximum efficiency with reduced risk scenarios
- Assurance to the stakeholders about the control efficacies
- Assistance to professionals in their continuous up-skilling.

We support Enterprises in adopting emerging auditing and analytical tools in their internal continuous monitoring so as to obtain a real time assurance on their enterprise activities
